EDUCATION

Delhi Technical Campus, GGSIPU — New Delhi, India
Bachelor of Technology — Computer Science and Engineering | October 2024 – Present

SKILLS

Languages: TypeScript, JavaScript, Python
Web Development: Next.js, React.js, NestJS, Django, Flask
Databases: MongoDB, PostgreSQL, MySQL
Dev Tools: Git, GitHub, Postman
System Design: Scalability, Load Balancing, Caching, Database Sharding & Indexing, Microservices Architecture, API Design, Message Queues, CAP Theorem, High-Level & Low-Level Design (HLD/LLD)

WORK EXPERIENCE

Full Stack Developer — Intern, Scitech Industries — New Delhi, India
Aug 2025 – Oct 2025

- Contributed as a Software Development Engineer (SDE) across backend and frontend development.
- Built and optimized RESTful APIs using NestJS (TypeScript), improving response efficiency by 25%.
- Developed a scalable, Notion-like work order dashboard that streamlined task tracking for internal teams.
- Built responsive UIs with Next.js (TypeScript) and Chakra UI, integrating seamlessly with backend APIs.
- Improved page load performance by 20% using server-side rendering (getServerSideProps).
- Maintained a clean, modular codebase, reducing maintenance effort by 15% and speeding up feature delivery.

PROJECTS

Cesta — Next.js, TypeScript, NestJS, MongoDB (https://www.thebait.space/)

- Built Cesta, an all-in-one club management platform serving **500+** active users, replacing dependency on multiple third-party tools with a single system.
- Automated event email campaigns with personalized one-click unsubscribe links, cutting manual newsletter effort by **~70%** and improving inbox deliverability through SPF/DKIM-compliant sending.
- Built quiz and attendance modules with public/private access control and Excel/PDF exports, reducing manual attendance-tracking time by **~80%** and consolidating **3+** separate third-party tools into one platform.
- Designed a modular NestJS + MongoDB backend spanning **5+** independent feature modules (posts, quizzes, attendance, analytics, users), cutting new-feature integration time by **~40%** with zero changes to existing modules.
- Set up a **GitHub Actions CI pipeline** to automatically lint, type-check, and build both the Next.js frontend and NestJS backend on every pull request, catching integration errors before merge across the platform's **5+** feature modules.

ACHIEVEMENTS

- Published a Chrome extension, TaskTime — Scheduled To-Do & Reminders.
- Won Manthan Kriti 2025, an inter-college competition.
